Pred. No.

is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEIGHBORING COSMID INFORMATION

/codon_start=1 /product="Hypothetical protein C30F8.4a" /protein_id="AaK88457.1" /db_xref="GI:15150650"

/note="similar to protein kinases (PFam; pkinase, score; 183.25); coded for by the following C. elegans cDNAs: yk739d9.5, yk284c11.3, yk284c11.5, yk465a7.5, yk739d9.3, yk649h5.5"

The ω cosmid is 8300 bp overlap; the 3' cosmid is Y110A7A,

200 bp overlap. Actual start of this cosmid is at base position 197 of C30F8; actual end is at 40090 of C30F8.

Coding seqences below are the result of integration and manual review of the following data: computer analysis using the program Genefinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuji Kohara (http://www.ddbj.nig.ac.jp/c-elegans/html/CE_INDEX.html) and The C. elegans ORPeome cloning project (http://worfdb.dfcl.harvard.edu/), similarity to other proteins from BlastX analyses (http://blast.wustl.edu/), sequence conservation with C. briggae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans researchers trNAs are predicted using the program tRNAscan SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964). Location/Qualifiers

ABA9052:

Genomic sequence

```
cc encoding Saratin, an expression vector comprising the DNA sequence, a cc host cell transformed with the expression vector, antibodies immunospecific for Saratin, and methods for identifying Saratin agonists cc immunospecific for Saratin is useful for treating thromboembolic processes, cand for manufacturing a medicament for treating thromboembolic diseases. Ct is useful for preventing thrombotic diseases. Saratin is also useful for coating artificial surfaces, since use of Saratin renders them cc mon-adhesive for cells and prevents the activation of cells. It may also useful for modifying intraocular lenses in order to lessen the cc useful for modifying intraocular lenses in order to lessen the cc thrombogenecity of the lens material, for contacting the lens material for covalent crosslinking to modify the lens material. The lens material cc useful for refractive anterior or posterior chamber ocular implants, cc which may be implanted into the eye. This new type of coating avoids problems contributed by stimulated cell growth. In combination with other completely overcome posterior capsule opacification. The canting samples derived from host cell cultures or from a creating subject that generate course capsule opacification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                       This invention describes novel nucleic acids (I; designated LOBO (long bones)) encoding proteins influencing bone development in mammals. The proteins of the invention reduce and/or inactivate bone extension (i.e. development), with exception of the skull and have osteopathic activity. The nucleic acid molecules, proteins and antibodies can be used in diagnostic or pharmaceutical compounds e.g. for gene therapy. The methods and nucleic acid molecules, etc. are useful for production of transgenic animals, especially a transgenic mouse for the study of diseases associated with bone development, e.g. spondyloepiphysal dysplasia and achondroplasia. This sequence encodes the murine LOBO protein described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                10190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABB16175) and the encoded proteins

CC polynucleotides, antibodies against human ovarian antigens, and the use CC of ovarian antigen polynucleotides and polypeptides in diagnosing, CC treating, prognosing or preventing various ovary and/or breast-related CC disorders. Such conditions include ovarian cancer and breast rencer, and CC disorders (e.g., infertility, disorders or lyin, reproductive system CC disorders, infertility, disorders of pregnancy, anovulation, CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine CC shock syndrome), inflammatory conditions (e.g., mastitis, cophoritis and CC vaginitis), immune disorders (e.g., congenital and acquired CC vaginitis), immune disorders (e.g., congenital and acquired CC immunodeficiencies, autoimmune cophoritis, systemic lupus erythematosus), CC blood-related disorders (e.g., anaemia), cardiovascular disorders, CC and urinary system disorders. Ovarian antigen polypeptides and CC polypucleotides may also be used in screening for compounds which CC modulate ovarian antigen expression or activity. The polypucleotides may GC dientification of individuals and in forensic analysis, and the CC polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenocyping. The present construction of the construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    03-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene therapy; chromosome mapping; forensic analysis;
antibody preparation; cytostatic; immunomodulatory; neuroprotective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammatory condition; immune disorder; blood disorder; cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; gene therapy; chromosome mapping; forensic analysis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δõ
               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerase are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1711
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1651
                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        infections by pathogenic microorganisms. p160 can be used to expand T cell populations for treating infectious diseases or cancer and p160 inhibitors could reduce B or T cell responses and may be used to treat a variety of autoimmune diseases, e.g. diabetes mellitus, arthritis, multiple sclerosis allergic reactions, Crohn's diseases etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This cDNA sequence encodes a novel p160 (160.2) which is capable of activating transcription of a variety of genes upon activation of p62 and is capable of binding to the p62/p561pk complex to modulate Lck function in a manner similar to p62. The genes transcribed in response to p160 activation likely include those of which are involved in T or B cell development/differentiation, T or B cell activation or production of T or B cell specific factors e.g. lymphokines or antibodies. This p160 polypeptide is also a substrate for serine/threonine kinase activity. p160 polypeptides can modulate degradation of cellular proteins e.g. cell p160 polypeptides can modulate degradation of cellular proteins e.g. cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2518
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          p160; p62; cytoplasmic; T cell; B cell; development; activation; modulation; cellular response; cell proliferation; autoimmune di

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rinis cDNA sequence encodes a novel p160 (160.1) which is capable of activating transcription of a variety of genes upon activation of p62 and is capable of binding to the p62/p561pk complex to modulate Lck function in a manner similar to p62. The genes transcribed in response to p160 activation likely include those of which are involved in T or B cell development/differentiation, T or B cell activation or production of T or B cell specific factors e.g. lymphokines or antibodies. This p160 polypeptide is also a substrate for serine/threonie kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    p160 polypeptides can modulate degradation of cellular proteins e.g. cell cycle regulatory proteins stimulating expression of cell cycle dependent kinase inhibitors and arresting cell cycle progression at specific boundaries to thereby modulate cell proliferation. As p160 boosts B cell response it may be used to treat disorders where this is beneficial, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB33000-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a spatially-addressable set of single exon contacting contacting gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids contacting the probes with a collection of detectably labelled nucleic acids contacting the probes with a collection of detectably labelled nucleic acids contacting the probes with a collection of detectably labelled nucleic acids contacting the probes with a collection of detectably labelled nucleic acids contacting the probes are useful for contacting the label contacting the expression of regions of genomic DNA predicted to compare the protestant. They are useful for gene discovery, and for contacting predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater continuous contaction of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from without and information in the part of the contaction in the present contaction in the part of the contaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of printed specification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human

The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular systems, cardiovascular disease, hypertension, cardiac arrhythmias and

                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                    measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases
                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                          of the breast, fibrocystic changes, non-carcinoma tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 25; SEQ ID No 7803; 322pp;
